**McCreadie Group Security Assessment Finds Zero Vulnerabilities
in its Vestigo Software**

Ann Arbor-based pharmacy software solutions company passes a rigorous penetration and vulnerability test on its information security system.

July 18, 2018 – ANN ARBOR, MI - McCreadie Group, Inc., a privately held pharmacy software solutions provider headquartered in Ann Arbor, Michigan has completed a comprehensive information security assessment on its Vestigo® software. The assessment evaluates the design and adequacy of its current external information security controls and includes external network system and web application penetration testing. The vulnerability scan identified zero external vulnerabilities.

Testing was performed at a threat level equivalent to an experienced hacker without malicious intent or impact. CyberGuard Compliance performed penetration testing against the configuration of the firewall and hosts with the testing environments white listed on the McCreadie Group protection systems. The goal was to simulate the actions of an actual hacker with the knowledge gained during the discovery process and vulnerability scanning.

“This was a rigorous test of Vestigo’s security. We proactively sought out this assessment because client data security is of utmost importance to us. Being a software company, we take this topic very seriously and are pleased to have passed the assessment,” said Ken Messer, DevOps Engineer at McCreadie Group.

“By fully adopting SOC2 Type 2 audits of the company and data center and completing on-going third-party penetration and vulnerability tests, we can assure Vestigo clients that their data is safely protected, meets their compliance needs, and that McCreadie Group will continue to provide high quality-solutions,” said Scott McCreadie, President and CEO at McCreadie Group.

About McCreadie Group

The McCreadie Group, Inc. was founded in 2004 to provide software solutions for pharmacy applications in healthcare, research and educational settings. McCreadie Group’s goal is to drive improvements in quality, efficiency, safety and compliance in the pharmacy profession by delivering innovative software and consultative support.
